

class

The **class** selector allows you to style a group of items with the same attributes.

If I change the class called “myCircle” to yellow, all the circles in that class turn:

```
7 <head>
8
9     <link rel="stylesheet" type="text/css" href="styles.css">
10
11 </head>
12 <body>
13
14 <h1 class="odd">This is a headline 1</h1>
15
16 <h1 class="even">This is a headline 2</h1>
17
18 <h1 class="odd">This is a headline 3</h1>
19
20 <h1 class="even">This is a headline 4</h1>
21
22 <h1 class="odd">This is a headline 5</h1>
23
24 <h1 class="even">This is a headline 6</h1>
25
26 <h1 class="odd">This is a headline 7</h1>
27
28
29 </body>
```
